QS1 Evidence Annex

This annex attaches a QCI scan to a QCI-QS1 assessment. It is discovery output. It is not a validated inventory and it is not the QS1 readiness score.

Cite: Quantum Core Institute. QCI-QS1 Quantum Readiness and Post-Quantum Cryptography Governance Standard. Version 2.3. September 23, 2026.

1. Identification

Field	Value
Organization	
System or critical flow	
Accountable owner	
Technical reviewer	
Assessment date	
Scanner version	
Input revision	
Scan date	

2. What this is

QS1 term	This annex
Discovery output	The findings in findings.json
Scan reach	scan-coverage.json: files read, parsers used, skipped
CBOM	cbom.json, CycloneDX 1.6
Evidence	evidence-manifest.json: build, revision, hashes

Scan reach is not coverage. QCI-5.1-03: scan reach shall never replace the coverage metrics.

3. Scan reach

Files read	
Parsers used	
Skipped, and why	
Partial	Yes / No
Gate result	Exit 0 / Exit 1

A partial scan is not evidence of a clean tree. It is evidence that the scan did not finish.

4. Findings

Family	Status	Path	Line	Parameter	Owner

Status is the scanner's classification. It is not a QS1 exposure determination.

5. Exposure flags the scanner can support

QS1 flag (QCI-5.3-01)	Scanner evidence
Vulnerable protection of long-lived confidentiality	Findings with status vulnerable, plus data lifetime if supplied
Unknown algorithm or profile	Findings with status unknown, or an empty parameter
Missing ownership or evidence	Owner field empty
Inadequate discovery provenance	Partial scan, or a skipped parser

An approved migration plan does not clear a flag. The scanner does not clear one either.

6. What this annex is not

QS1 requires	Why this annex does not provide it
Validated inventory record	Needs an owner and a reviewer confirming identity, links, and freshness
System and critical-flow coverage	Needs an identified population. The scanner has a tree.
The QS1 readiness score	QS1 scores maturity across pillars. The scanner scores findings.
Supplier conformance	Name matching does not show the same implementation or version
Freshness under 90 days	The scanner does not know when a finding was last reviewed

7. Reviewer confirmation

Reviewer	
Date	
Confirmed identity and dependency links	Yes / No
Confirmed evidence is relevant and current	Yes / No
Unknown values left explicit	Yes / No
Disposition	Validated / Incomplete / Not applicable, with rationale

Owner acknowledgement alone does not verify unknown cryptographic attributes. A record with an unknown algorithm, parameter, or key-protection mechanism shall not count as validated coverage.
